Linux Commands Cheat Sheet

File Operations

access
basename
cat
cksum
cmp
compress
cp
cpio
csplit
cut
diff
diff3
echo
expand
file
fold
head
join
less
ln
locate
look
more
mv
od
paste
readlink
rename
rev
rm
shred
sort
split
tac
tail
tar
touch
unexpand

Disk and File System

cfdisk
df
dosfsck
dump
dumpe2fs
fdisk
mount
restore
sync

Kernel and Module Management

depmod
insmod
lsmod
modinfo
rmmod
systemctl

Checksum and File Integrity

md5sum
cksum
sum

Printing and Media

amixer
aplay
aplaymidi
cupsd
eject
import

Help and Documentation

apropos
help
info
man
whatis
which

Directory Operations

cd
dir
dirname
dirs
du
find
lsblk
mkdir
mount
pwd
rmdir
tree

Group Management

groupadd
groupdel
groupmod
groups
gpasswd
grpck
grpconv

Package Management

apt
apt-get
aptitude

Hardware and System Information

acpi
acpi
available
acpid
arch
dmesg
dmidecode
dstat
free
hdparm
hwclock
iostat
iotop
lsusb
lshw
uname

System Control and Power

halt
poweroff
reboot
shutdown

Date and Time

cal
date
uptime

Development & Build Automation

aclocal
addr2line
autoconf
autoheader
automake
autoreconf
autoupdate
bison
CC
cpp
ctags
g++
gcc
gdb
ranlib
readelf

File Permission & Ownership

chmod
chattr
chmod
chattr

Process Management

accton
bg
chrt
fg
kill
mpstat
pidof
pmap
ps
top
htop
strace
time
watch
vmstat
uptime
W

Job Scheduling

atd
atrm
atq
batch
cron
crontab

Compression and Archiving

ar
bzcmp
bzdiff
bzgrep
bzip2
bzless
bzmore
gunzip
gzip
gzexe
zip
zdiff
zgrep

Logging & Monitoring

journalctl
last
history
sar
script
scriptreplay

Mail and User Communication

biff
mailq
write
wall

Terminal and Session Management

agetty
chvt
reset
screen
showkey
stty
tty
xdg-open

User Management

chage
chfn
chsh
chpasswd
finger
id
passwd
username
useradd
userdel
usermod
users
who
whoami

Networking

arp
curl
host
hostid
hostname
hostnamectl
ifconfig
iftop
ifup
ip
ipcrm
ipcs
iptables
iptables-save
iwconfig
nc (netcat)
netstat
nmcli
nslookup
ping
rcp
route
rsync
scp
ssh
tracepath
traceroute
vnstat
wget

Text Processing and Formatting

awk
aspell
banner
bc
col
colcrt
colrm
column
dc
egrep
fgrep
fmt
grep
sdiff
sed
tr
unix2dos

Shell Built-in and Scripting

alias
bind
break
builtin
case
continue
declare
enable
env
eval
exec
exit
expect
export
expr
factor
fc
function
for
if
let
printf
read
return
select
seq
setsid
shift
source
type
until
while

Linux Shortcuts Cheat Sheet

IO Redirection Commands

cmd < file : Redirects the input of cmd to be read from file instead of the keyboard.
cmd > file : Redirects the standard output (stdout) of cmd to file, overwriting existing content.
cmd >> file : Appends the standard output (stdout) of cmd to the end of file.
cmd 2> file : Redirects the error output (stderr) of cmd to file.
cmd 2>&1 : Redirects stderr to the same destination as stdout.
cmd &> file : Redirects both stdout and stderr to file.
cmd 1>&2 : Redirects stdout to the same destination as stderr.
cmd > /dev/null : Discards the standard output by sending it to the null device.
cmd1 <(cmd2) : Uses the output of cmd2 as an input file for cmd1 (process substitution).

Environment Variable Commands

export VARIABLE_NAME=value : Sets and exports an environment variable so it is available to child processes.
echo $VARIABLE_NAME : Displays the value of a specific environment variable.
env : Lists all environment variables currently set in the system.
unset VARIABLE_NAME : Removes or unsets an existing environment variable.
export -p : Shows a list of all currently exported environment variables.
env VAR1=value COMMAND : Sets an environment variable temporarily for a specific command execution.
printenv : Displays the values of all environment variables or a specific one if provided.

Bash Shortcuts Commands

Navigation Shortcuts

Ctrl + A : Move to the beginning of the line
Ctrl + E : Move to the end of the line
Ctrl + B : Move back one character
Ctrl + F : Move forward one character
Alt + B : Move back one word
Alt + F : Move forward one word

Editing Shortcuts

Ctrl + U : Cut/delete text from the cursor to the beginning of the line
Ctrl + K : Cut/delete text from the cursor to the end of the line
Ctrl + W : Cut/delete the word before the cursor
Ctrl + Y : Paste the last cut text
Ctrl + L : Clear the terminal screen
Ctrl + C : Terminate the currently running command

History Shortcuts

Ctrl + R : Search command history (reverse search)
Ctrl + G : Exit history search mode
Ctrl + P : Go to the previous command in history
Ctrl + N : Go to the next command in history

Nano Shortcuts Commands

Search and Replace

Ctrl + W : Search for a string in the text
Alt + W : Search and replace a string
Alt + R : Repeat the last search

File Operations

Ctrl + O : Save (write) the current file
Ctrl + X : Exit Nano (prompts to save if the file is modified)
Ctrl + R : Read and insert another file into the current buffer

Navigation

Ctrl + Y : Scroll up one page
Ctrl + V : Scroll down one page
Alt + \ : Go to a specific line number
Alt + , : Move to the beginning of the current line
Alt + . : Move to the end of the current line

Editing

Ctrl + K : Cut/delete text from the cursor to the end of the line
Ctrl + U : Uncut (paste) the last cut text
Ctrl + 6 : Mark a block of text for copying or cutting
Alt + 6 : Copy the marked block of text
Ctrl + K : Cut/delete the marked block of text
Ctrl + J : Justify (format) the current paragraph
